New design enhances safety and reduces changeover time on PCMC's Omnia embosser-laminator

Improved pivot arm is available as an aftermarket modification

GREEN BAY, Wis. – Nov. 25, 2019 – Paper Converting Machine Company (PCMC), part of Barry-Wehmiller, has announced that the redesigned pivot arm on the [Omnia embosser-laminator](#) significantly decreases changeover time and reduces the risks inherent to overhead roll removal. The new design will be standard on all Omnias sold, effective immediately. This pivot arm also is available as an aftermarket modification for existing machines in the field.

Because the shape of the pivot arm has changed, operators can move the lower rubber embossing roll out on rails to an assembly extraction position, from which the embossing roll can be lifted vertically during removal, without the need for rigging and slinging. This improved design reduces the risk of injury or damage during roll removal, and also decreases the amount of time required during a changeover.

"It will save hours in the roll-change process," said Jason Hilsberg, PCMC Tissue Sales Director. "PCMC is always working to improve the capabilities and features of our machines for our customers, and more specifically, to enhance the experience of the operators. The decreased changeover time this new design offers will bring about a more efficient process to keep tissue operations running quickly and smoothly. It's a win for our customers, and ultimately, their customers."

ABOUT PAPER CONVERTING MACHINE COMPANY (PCMC)

Paper Converting Machine Company (PCMC) specializes in the design and manufacture of high-performance converting machinery for the tissue, nonwovens, package-printing and bag-converting industries worldwide. Our comprehensive product offerings include rewinding, laminating, printing, embossing, perforating and packaging equipment for tissue and towels; folding and converting machines; and a complete range of flexographic printing presses and laser anilox cleaners, serving the flexible-packaging, prime-label and carton-converting industries.
