FPA Publishes New Sustainability Report on E-commerce

FPA partners with PTIS, LLC to provide a holistic view of the sustainability benefits that flexible packaging offers in e-commerce

Annapolis, MD: July 17, 2020 – The Flexible Packaging Association (FPA) is pleased to announce that the *Sustainability Life Cycle and Economic Impacts of Flexible Packaging in E-commerce Report* is now available.

E-commerce is a growing economic segment and as more products are shipped via e-commerce, brands continue to look for ways to optimize the shipping, reduce costs, and reduce environmental impact, while offering consumers a positive experience and protecting the product. In an effort to achieve these goals, more brands and e-commerce providers are using flexible packaging as either the primary package due to its ability to withstand robust handling and limit leaks, or as the e-commerce delivery pack itself as a way to reduce the amount of packaging material and space utilized.

FPA partnered with PTIS, LLC to provide a holistic view of the sustainability benefits that flexible packaging offers in e-commerce and to quantify the environmental and economic shipping impacts comparing flexible packaging to other formats across a range of products.

For the report, five different LCA case studies were developed using the EcoImpact-COMPASS® LCA software, which allows for quick life cycle comparisons between different package formats and included a wide range of products including shoes, cereal, peanut butter, laundry detergent, and flat mailers. All primary, secondary, and tertiary packaging, including dunnage from the packages, were used for the assessment. Dunnage is a filler that is used to prevent a product from shifting during shipping, resulting in product damage. Dunnage may be either paper or plastic based, and includes crumpled paper, corrugated inserts, air pillows, and bubble wrap.

Additionally, the product-to-package ratio, as well as the amount of packaging that is landfilled for 1,000 kg of each product, was determined. The amount of packaging landfilled was based on the recycling rates for each material while assuming none of the flexible packages were recycled. However, most flexible packaging used in e-commerce applications, including bubble dunnage or poly mailers, are made of LDPE, which can be recycled with grocery bags and other films as part of the grocery store drop-off program. These materials can qualify for the How2Recycle® store drop-off designation if they go through the certification process.

The results from many of the case studies show that flexible packaging has more preferable environmental attributes for carbon impact, fossil fuel usage, water usage, as well as material disposed of when compared to other package formats. This is due to the efficient use of resources enabled by flexible packaging.

An additional benefit of flexible packaging includes the robust nature of the material, which can help reduce leaks or package breaks, thus significantly improving consumer enjoyment of a product (and brand). This is important in an e-commerce environment where a product is handled at least three times as often as is done within a traditional retail channel.

The report is publicly available and can be downloaded by [clicking here](#).

About the Flexible Packaging Association (FPA)

The [Flexible Packaging Association](#) is the voice of the U.S. manufacturers of flexible packaging and their suppliers. The association's mission is connecting, advancing, and leading the flexible packaging industry. Flexible packaging represents over \$33 billion in annual sales in the U.S. and is the second largest, and one of the fastest growing segments of the packaging industry. Flexible packaging is produced from paper, plastic, film, aluminum foil, or any combination of those materials, and includes bags, pouches, labels, liners, wraps, rollstock, and other flexible products.

About PTIS, LLC

[PTIS, LLC](#) is a leading business and technology management company focused on Creating Value Through Packaging® and helping clients throughout the packaging value chain develop long term packaging strategies and programs. PTIS, recognized for foresight and thought leadership, and the success of their 20-year Future of Packaging program, helps companies achieve and incorporate these elements into their innovation programs, e-commerce, holistic productivity, sustainability, holistic design, and consumer/retail insights related to packaging.
