

Coating, laminating and metallizing machinery

NEWS

Editorial Contact: Giancarlo Caimmi 631-242 9898
Release: Immediate

Piacenza, Italy: September 14th, 2020

Nordmeccanica Events comes back for its third date.

The event, which will present the Vacuum Metallizers assembly plant of Nordmeccanica, will be on air live streaming on Thursday, October 14 with two shows: at 9:30am and 5:00pm (CET) so to reach all our customers around the world.

This episode is therefore intended for both those converters that deal with metallization, and those who instead use metallized material in their processes. In 90 minutes the latest developments of this technology will be presented.

The program includes the demonstration of our Powermet 29F, through which will be shown both the new Metallizing Technologies and a detailed description of their functioning: how metallization and its processes develops.

Starting from the conclusion of the second episode, it will then be demonstrated the use of the new Barrier Coating of our partner Henkel, a special coating used to protect Alox and thus increase the values of the gas barrier.

Part of the event will focus on the causes and solutions of the most common problems that can be encountered in the metallization field. Finally, we will have a segment for converters on how to improve quality and productivity in their conversion processes through informed metallizing sources.

As for the other events, those who will connect to watch the episode, will benefit of the access to the recordings of previous episodes as well as all other contents on the platform of Nordmeccanica Events. As well all registered guests will have the opportunity to interact with inquiries and comments both during and after the live episode.

Registration for the event is open at www.nordmeccanica.com.
