

HOSOKAWA ALPINE AMERICAN, INC – PRESS RELEASE FOR K-SHOW 2022

(NOTE: Please publish this release ASAP, & before October 18th)

“A Sustainable K-Show” Why ALPINE is Leading the Industry by Making Difficult Decisions

Hosokawa Alpine, a leading supplier of Blown Film Extrusion Systems, has made the difficult but responsible decision to present our blown film technology at K-Show 2022 in a truly SUSTAINABLE way. Alpine will not be running a full-scale production line for the first time in over 40 years to eliminate the wasteful uses of resources a production scale line requires.

Alpine is investing in their most important asset, their customers. In the age of Sustainability, now is the time to dispense with wasteful traditional norms, and focus on environmentally friendly, and thoughtful ways to present our exceptional technology to produce Ecologically, Environmentally and Economically Superior Packaging Solutions.

By presenting our technology in an environmentally responsible way we achieve the following:

- Conserve over 18,000 kw/h in energy
- Conserve 150,000 lbs of valuable raw materials
- Save over 1,000 man-hours of show preparation, installation, and operation that will be utilized serving our valued customers
- Utilize a complete Blown Film Line of equipment for customer needs in the face of an on-going Supply-Chain-Crisis

Alpine has made this decision from a position of Strength and Leadership; we will have a significant presence at our traditional Booth location in a Brand New and Dynamic Show display. We will be showcasing innovative machinery and sustainable solutions in an effective and unique way, including the latest MDO Technology, new extrusion innovations for Bio and related materials, and other process enhancing and optimizing solutions.
